

Amherst Enterprises Limited - Vehicle Radios For Hire

We have Kirisun PT8100 vehicle two-way radios for hire.

These radios have 25 watts power output, giving them a significantly longer range than walkie-talkies, which usually have 4 watts power output. We have set our vehicle radios up for ease of use in cars and other vehicles, by fitting a "cigarette lighter" plug on the power lead, so that they can be plugged in to the 12 volt socket found on most vehicles.

They are ideal for use when travelling with a "convoy" of vehicles. We often hire these radios out to car clubs, groups of friends going on a touring holiday together, etc.

Hire kit includes radio, cigarette-lighter power lead, and magnetic-mount aerial to stick to vehicle bodywork.

We provide magnetic mount aerials that will stick to the vehicle's bodywork, with a lead running through a car window to connect to the radio.

We do also have a few "sucker" attachable aerials, useful for vehicles with non-steel bodywork.

The vehicle radios do not need any kind of "installation" in the vehicle – the power lead just plugs in to the 12 volt "cigarette lighter" socket found on most cars, vans etc, and the magnetic aerial will attach to the roof of any steel-bodied vehicle.

Prices:

£19 + VAT for up to 1 week
£26 + VAT for 1 to 2 weeks
£31 + VAT for 2 to 3 weeks
£36 + VAT for 3 weeks to 1 month
