Hytera Digital Base Radio Desk Microphone Kit

We have several Hytera digital “base station” radios available for hire.

These will work with our main hire walkie-talkie, the Hytera PD705.

For event management, it can often be useful to have a powerful “base station” radio located in your event management location (a caravan, portakabin or other structure).

It can also be useful for the base station radio operator to have a desk microphone to use instead of a handheld “fist microphone” as is normally supplied with these radios.

Desk microphone kit attaches to our standard Hytera digital “base station” radios, offering a more convenient user experience for event co-ordinators etc.

The desk microphone can optionally have a foot-operated PTT (Push-To-Talk) switch plugged in.

Using this allows the radio operator to have both hands free whilst using the “base” radio.
